Training for Operators of Overhead Crane & Hoists

www.cranetraining.ca

Crane Training Canada (CTC) has trained over 100,000 crane & hoist operators since 1998. Experience tells us that each situation has its own unique circumstances; each requires individual consideration for the safe and efficient operation of cranes. Having been involved in all aspects of hoist and crane activity including design, maintenance, modernization and customer service for more than 35 years, we are able to satisfy the specific questions and inquiries from our trainees. Although we are working from a general crane operations presentation, with the participation and cooperation of the trainees, we will develop a customized training session that focuses on your specific crane requirements.

We are pleased to present special member pricing to the members of Ontario Sign Association.

Please note, verification from the OSA office will be required to qualify for the special rates. Connect with OSA to receive your confirmation proof of your membership status.

Pricing:

- **One session (2 days) with up to 8 attendees**
At your (OSA Member) facility. **Total: \$ 2,875.00 Lot**

Summary of Sessions:

We have assumed a travel radius of approximately 150km from our Hamilton, ON location. Please contact us directly for a review of costs, if travel is to exceed the radius.

One session (Two Days) For new operators theoretical and practical hands training with up to 8 attendees, all having successfully completed the CTC crane operator certification course, on

Day One:

In class training for approximately four (7) hours. Each attendee will receive a reference training manual.

The course will cover the operator assessment of risk and evaluation options for movement of loads, we will provide instruction on the best practices and the do's and don'ts of Boom crane activity. We will specifically review the precise load chart for the boom, stabilizers/outriggers, communication/signaling and crane ancillary equipment inspection. The course is an interactive training program that allows individuals to actively participate in the course through open dialogue with the trainer.

The classroom training will be concluded with a written test that will serve to document the information retained by the individuals and signing of a sign-out sheet.

Day Two:

Demonstration of Skills: Hands on proper crane checkout of daily OHSA safety inspection requirements performed by each individual. The trainees will be asked to perform a specific task(s) and are appraised on their ability to communicate and control a loaded crane safely. Questions will be answered and more time will be spent with students with less experience than those the instructor has determined are adequately competent. Trainees may leave to go back to their work once they have concluded the practical review. The order in which they are seen by the trainer is up to the customer.

Availability of the student, load, appropriate crane(s) and rigging is essential and must be arranged prior to the session.

The entire course is structured to cover the essential information required by crane operators. Our trainer will direct, as best he can, the course to the specific intricacies of your operation. It is for this reason that some flexibility in terms of the time is appreciated.

The boom crane manufacturer, model number, total boom length and capacity must be provided. In addition, a copy of the operators and maintenance manual is required at least 2 weeks prior to the date of training. If the manuals are not available, we can contact the manufacturer and secure one at an extra charge.

Certification:

Upon successful completion of the course and satisfactory testing, each attendee will be given a Certificate of Crane Operator Proficiency.

There is no substitute for experience, having completed this course the operator will have received the necessary instruction and have been made aware of the rules that are applicable to safe operation. The workers that are new will require additional properly supervised practice under all working conditions that may arise in order to properly imbed the proper reaction in the event of a problem. We recommend that all workers who are not regularly using the equipment be scheduled for practice time on a regular basis.

The length of the course is dependent on the number of students and on the length of question and answer sessions. The session will be held at your facility. The training normally begins early in the morning (typically 7:00 am) and is for a session not exceeding seven (7) hours, alternate times can be arranged and may involve additional costs. All other trainer's expenses are covered.

Terms and Conditions:

- Each additional trainee over the amount quoted will be at a charge of \$ 200.00
- Prices quoted are subject to change 60 days from date of proposal.
- Prices do not include any applicable taxes. (NOTE: Training and all associated costs are normally tax-deductible expenses. Consult your tax department.)
- Terms of Payment: A deposit of 25% is required with the order; the balance is to be paid on the date of training.
- The training proposed above is intended to comply with the requirements of the Provincial/state Laws and the Occupational Health and Safety Act of 1990 and The Safety and Health Act, as amended and interpreted to the date of this proposal, as said Act is understood by Crane Training Canada.
- Cancellation of a training session prior to 30 days before scheduled date may result in a cancellation charge not to exceed \$50.00 per attendee plus any cancellation charges incurred by Crane Training Canada. Cancellation within 30 days of the training schedule will result in 100% payment due at the time of the invoice.
